

## Twin-Pack Cartridge Dispense System

A semi-automatic cartridge dispensing system allowing for Metering & Mixing operations direct from the cartridge. For less viscous materials an optional 710PT-LF pinch tube valve is available. The valve is mounted at the static mixer tip for accurate dispensing of drip-free mixed deposits.

The Fisnar Twin-Pack Cartridge Dispense System reduces stress and operator fatigue and ensures accurate dispensing with less rejects and/or wasted material.

A foot pedal operated Fisnar SL101 Digital Dispenser is included for repeatable timed cycling or manual deposits. A universal cartridge holder for 50, 200 and 400ml cartridges may be swiveled at any angle for a comfortable bench operating position.

Alternatively the system can be used in conjunction with a Fisnar robot as a convenient method of interfacing a cartridge feed for automatic deposition of mixed material.

### Included:

- 562223 Fixture Kit comprising:  
Secure Base  
Stand with Universal Holder  
Air Pressure Regulator
- SL101 Digital Dispenser
- Pneumatic Cartridge Cylinder

### Options:

- 710PT-LF Pinch Tube Valve Kit
- A full range of Static Mixers are available

### Part Number:

|          |   |
